

# FACT SHEET

## West Michigan Shoreline Materials Management Planning

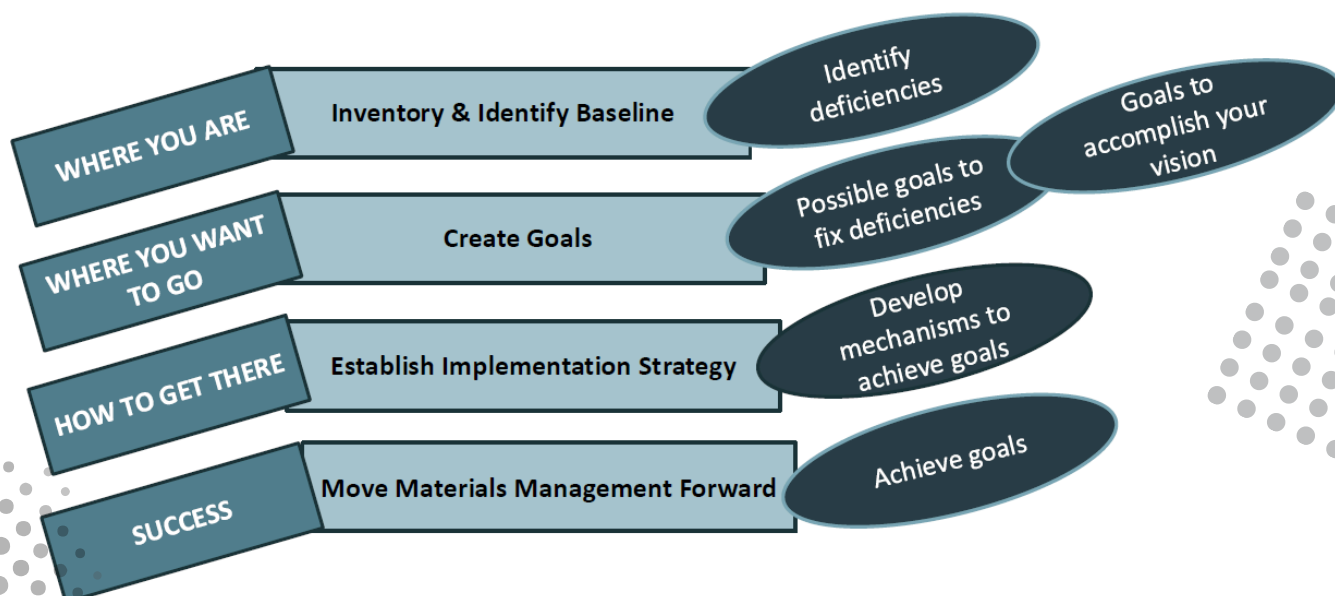

### MMP Overview

- ➔ Michigan is moving from solid waste planning to materials management planning focusing on sustainable materials management approaches, such as recycling and composting, instead of primary disposal.
- ➔ Each county is required to develop a single or multicounty Materials Management Plan (MMP) following updates to PA 115 by the Michigan legislature.
- ➔ MMPs will establish goals with measurable objectives to divert recyclables and organics from disposal, while also increasing recycling access and education.
- ➔ Counties must complete the planning process, including the MMP development and local approvals, by July 2027.
- ➔ MMPs replace existing solid waste management plans, once approved.
